

STATUS INDICATION SIGNALING SOLUTIONS

See It. Know It. Act Fast.

Status Indication – Make Machine and Process Conditions Visible and Clear

In fast-paced industrial environments, visibility is everything. With operators often responsible for multiple machines and processes, every second counts. Clear status indication supports efficient workflows, quick responses, and smooth operation because when uptime matters, signals make the difference.

Why Status Indication Matters

Your machines communicate through signals. Reliable status indication ensures operators can see, understand, and respond instantly keeping processes efficient and running smoothly.

- Detects faults early & avoid unplanned downtime
- Enable preventive maintenance & optimize availability
- Increase efficiency & improve process transparency

Signal Colours at a Glance

Signaling devices use standardized colours to convey specific machine and process states. According to EN 602404-1, each colour has a defined meaning from normal operation to warnings and critical faults. Understanding these colour codes enables any operator to interpret machine status at a glance, react quickly to changing conditions, and maintain smooth, efficient production processes.

Color	Meaning	Type
● Red	Immediate or serious hazard	Machine stop, emergency, fault condition
● Yellow	Abnormal condition, attention required	Warning, process deviation, maintenance needed
● Blue	Specific operator action required	Manual intervention, confirmation reset
● Green	Normal operating condition	Machine running, process active
○ White	Neutral information or general indication	Power on, standby, system ready

Status Indication Signaling Solutions

5 Steps to Select the Right Signaling Device for Reliable Status Indication

1. Identify Required Statuses

What conditions need signaling — e.g., running, maintenance, fault?

2. Consider Environment & Visibility

Account for obstructions, lighting, and noise levels.

3. Choose Signal Type

Visual only or visual + audible for faster recognition.

4. Select Modes & Colours

Steady, blinking, or flashing lights in red, yellow, green, blue, or white.

5. Plan Installation & Integration

Ensure easy setup, durability, and system compatibility (e.g., IO-Link).

Pfannenberg Status Indication Devices

Engineered for visibility. Built for clarity.

- Multi-colour LED and combined visual/audible modules
- Highly visible in industrial environments
- Function-monitored variants for demanding applications
- Configurable modes: steady, blinking, flashing, multi-colour
- Robust mounting, various control technologies, smart integration

Typical Applications

	Production line & fault status indication		Process plant supervision
	Maintenance and setup modes		Intralogistic & smart factory systems

Pfannenberg – Protecting people, machines, and the environment.
